Oxygen Notes

LED

- Red → Rejuvenation, aging, brightening, elasticity, 630 nm
- Blue → Acne, pores → 465 nm
- Violet → Post-procedure (relaxing), both lights (Broad wavelength)

O2

- Healing; Pore size; Vasoconstrictor
- Uses of Ziolite is to attract (N) so the O2 remains (high-concentrated O2)
- Air has 21% O2; You will get 99.9% of that; But with tank is +50%

Anion

- Kills 99.9% germs; Rainforest waterfall (Lenna effect); Reduces free radicals which is the main cause of aging

NIR

- 855 nm; stimulates cell activity which helps mitochondria power house of the cell, to increased collagen production, and enhances penetration for both lights

Dome sessions

- Anion = dry; Mist = wet

Masks & Finishing

- Pore mask: removes makeup, surface oils, and environmental impurities, ensuring the skin is clean and prepped for treatment.
- HA Gel and Toning Gel: serve as both active skincare and conductive mediums for LED and anion penetration.
- CT mask: (Alginate + Seaweed) Clarifying / acne, Oil control, bacteria reduction
- Serum + cream: balancing the PH of the skin

Treatment Steps

1. Pore Mask

Mix the pore mask (2p) with the cryogenic activator, then stir to make it fluffy.

Cover your eyes, then put on a fluffy mask and start a gentle massage.

Put on face, no brushing, then use a sponge to clean it thoroughly.

2. Power Wash (Scaling)

Power-wash the face with a cryogenic activator sprayer. rubbing the skin or a gentle massage on the skin, and at least (2 passes for each area).

Use a sponge on the sides to keep the client from getting wet. (decreasing the skin temperature)

3. Change the Activator Bottle to the Oxygen Formula Bottle from the Sprayer

Change the activator to the oxygen formula and start spraying it very closely, 3–5cm from the skin. Use a Q-tip for precision to prevent dripping (no eye and mouth).

4. Gel Mask

HA gel + Toning gel - One to one portion, and brush it on the face.

5. Dome

Fill the reservoir with 4 cc of the activator for using the dome, and press (LEPA anion or mist + NIR).

Don't forget to cover the eyes with cotton and plastic glasses. (14 minutes of dome time.)

6. Clarifying Mask

Clarifying mask + toning gel: Brush it on the face, then cover the eyes and put a fluffy mask (sheet or gauze) over the face.

Then, (alginate mask + distilled water), stir and leave it on the face for 10 minutes.

Then spray the scalp with cryogenic activator. (You can have a normal sheet mask, optional for ease of use, instead of an alginate mask.)

7. Finish

Clean face → Put serum → Put cream.

Important

LED is contraindicated during pregnancy, so turn it off during pregnancy, but it's ok for permanent makeup.
